### PEPFAR's Contribution to the Epidemic Control in Mozambique

Even in the context of the COVID-19 pandemic, PEPFAR has managed to make significant contributions to the response to HIV/AIDS in Mozambique. These are some of the indicators that measure the efforts made for HIV prevention and treatment between October and December 2021.

#### PREVENTION

Number of HIV tests performed during the quarter

**2.212,723**

Number of men circumcised during the quarter

**33,574**

Number of people who received a positive HIV test result during the quarter

**80,447**

Number of people who received oral pre-exposure prophylaxis (PrEP) to prevent HIV during the quarter

**15,623**

#### TREATMENT

Number of pregnant women who received treatment to prevent mother-to-child transmission of HIV during the trimester

**23,336**

Cumulative number of people living with HIV who are on antiretroviral treatment by the end of the quarter

**1.674,377**

Total number of people living with HIV who started antiretroviral treatment during the quarter

**77,316**

% Of patients on antiretroviral treatment who received viral load test with result suppressed during the quarter

**92%**

In Mozambique, PEPFAR implementation is coordinated by a U.S. government team comprised of the Department of State, United States Agency for International Development (USAID), Centers for Disease Control and Prevention (CDC), Department of Defense, and Peace Corps.
